## Service Technician

We provide our technicians to companies for project based work, machine overhauls, seasonal fluctuations, filling voids created by vacation absences, long-term leaves, and attrition.

- Mechanical
- Electrical
- PLC Automation & Controls
- Shift support, days or nights

Allow Proplastic Solutions to leverage their decades of packaging experience to keep your manufacturing operation running efficiently.

## Project Management

Proplastic Solutions project management team will work on behalf of your company to provide the necessary blow molding and packaging technical expertise.

Our team will oversee your project from supplier selection to product qualification to final operational systems and advise you on the most current designs and methods.

## Operation Systems

A production line requires several systems, processes, and standard operating procedures. Proplastic Solutions has specialized in off-site and in-line blow molding and filling operation systems and packaging for more than two decades.

Leverage our lean six sigma approach and decades of experience to help create, improve, and implement systems and processes, to assure high efficiencies and good quality that is repeatable overtime.

● EXPERTS IN PACKAGING LINES OF ALL VARIETIES

## Process Engineering

Process engineering is a dynamic that brings together critical blow molding parameters consisting of heat, pressures, and time to yield a product that meets specific application requirements and include on-site process development for all two stage product applications.

## Skill Advancement

The content of Proplastic Solutions training structure includes a range of training modules as well as training programs that cover the following:

- Operator entry level & Operator advanced
- Maintenance entry level & Maintenance advanced
- PET fundamentals & characteristics
- Process management & Process development

Proplastic Solutions will tailor a training program that will meet your specific needs.
